

Embedding flash without embed

```
<object type="application/x-shockwave-flash"
  data="c.swf?path=movie.swf"
  width="400" height="300">
  <param name="movie"
    value="c.swf?path=movie.swf" />
</object>
```

Note: the param name is very important. Change that, and it will not work. "movie.swf" should be replaced with the name of your flash module. It needs to be set in both path locations.
